FORT Manager Safety System Management & Integration Software

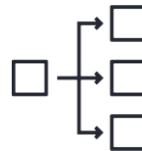

FORT Manager is the software layer required to configure, manage, and integrate FORT safety systems. It provides centralized device configuration, operational access, and optional API-enabled integration into customer workflows.

FORT Manager is licensed on an annual subscription basis and is required for FORT Pro Series hardware operation.

Key Capabilities

Easy Configuration & Management

- Centralized configuration of FORT Pro Series products
- Updated Command Line Interface feature access
- User access management

Seamless Integration

- REST API access
- Token-based authentication
- Designed for integration into internal systems

Online and Offline Updates

- Operate in air-gapped or low-connectivity environments
- Easily sync between local and cloud deployments

03

FORT Manager

Deployment Model

- Cloud-hosted backend
- Web-based interface accessible via modern browsers
- Desktop application available for local installation (Windows and Linux supported)
- Secure authentication and access control
 - Connection to FORT Manager secured via TLS 1.2
 - Configurable multi-factor authentication at the user role level

System Requirements

- Internet connectivity for cloud access
- Supported on modern web browsers (latest versions of Chrome, Edge, Safari recommended)
- Outbound HTTPS (TLS 1.2 or higher) connectivity required
- User authentication required for access

API Access (Available with FORT Manager Connect)

- Embed FORT functionality directly into your toolchain
- Use any programming language
- Automate repetitive tasks with scriptable batch operations
- Build dynamic configurations to support complex workflows *For example: automatically change configuration when robot enters a new zone*

04

License Tiers

FORT Manager is available as an annual subscription with two license tiers:

- **Core:** *Best for essential device configuration and supervision*
- **Connect:** *Best for integrated, flexible management at scale*

	CORE	CONNECT
